

# A clear technology direction. Someone to see it through.

I work directly with owners and their teams to guide technology decisions and carry out the improvements that matter. We start with your people, how work gets done, and where you want the business to go.

## Give your team time back for more valuable work.

Less chasing and duplicate work means more room to serve customers, follow up on opportunities, improve the operation, and grow.

### 01 Understand the work.

I spend time with the people doing it. Where does information get stuck? Who keeps things moving through reminders, spreadsheets, and copying between systems? What works well already?

### 02 Set the direction.

I help decide what to improve, what to keep, and what can wait. That includes evaluating software and vendors, finding unnecessary costs, and directing time and budget toward the changes most likely to help.

### 03 Make it happen.

Sometimes the answer is a clearer process or better use of existing tools. Sometimes it is a small bridge from a field report to the CRM. When custom software is needed, I build it around your work.

### 04 Stay involved.

As your needs change, I stay involved: reviewing what is useful, addressing what is not, and keeping the next investment connected to your priorities. We look at what is working and what the returned time makes possible.

#### GROUNDING IN REAL OPERATIONS

My work with an operating service business connects scheduling, dispatch, job information, and service documentation across the office and field. One example: moving scheduling from a whiteboard and emailed photo to shared office and field information.

## Let's look at where your business needs support.

We'll talk through your priorities, your tools, and the work your people still carry by hand, then define where I can take responsibility and what to tackle first.

Technology should make life easier for the people doing the work.
